

# Memory Management

- ① Pointers → function pointers
- new & delete (DMA)
- smart pointers
- lambda's in C++
- vectors

Pointers

int main() {

Compile time

int x = 10;

int \*ptr = &x;  
                  ↓  
                  address of

10

x

515 ← address

the stack frame of the function where we have made x, will contain

the bucket of x

int x;

int x = 10; → 10

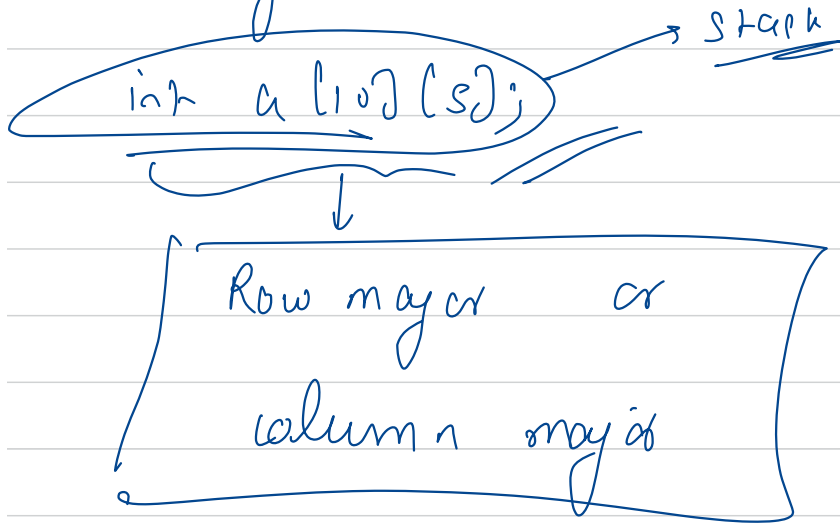

malloc

void pointer

C

2D array

heap

2D array  $\rightarrow$   $(3 \times 4)$

# function pointers
